Allowable Subject Matter

1. Claims 21-26 and 29-38 are allowed.
2. The following is an examiner's statement of reasons for allowance: In claim 21 applicant has claimed a system comprised of a chemical indicator and an apparatus for reading the chemical indicator. The chemical indicator is comprised of a substantially flat surface having a sterilizing-agent sensitive ink. The ink provides a first indicating state prior to being exposed to the sterilization process and a second indicating state after being exposed to the sterilization process. The two states are distinguished from each other by a change in color. The apparatus for reading the indicator is comprised of an illumination source positioned to direct energy at the indicator surface, a detector positioned to collect the energy reflected from the indicator surface, positioning means for positioning the indicator, a controller connected to the source and detector, and ***processing means including non-volatile memory that includes reference data comprising data generated from sterilization indicators that have been exposed to varying degrees of a sterilization process.*** The Examiner did not find prior art that teaches or suggests such a system. The Examiner considers the reference "Augurt" to be the closest prior art. Augurt teaches a chemical indicator test sheet that is read by a reflectometer. Augurt does not teach the specific elements of the test sheet reader and does not teach processing means including reference data comprising data generated from sterilization indicators that have been exposed to varying degrees of a sterilization process.
